

RC BOOTS SOLE WASHING MACHINE

The RC Boots Sole Washing Machine is a critical part of hygiene control in modern slaughterhouses and food processing environments. This machine is specifically designed to clean and sanitize the soles and sides of work boots before personnel enter sensitive or sterile areas.

Built from high-quality stainless steel, the unit features rotating brushes and pressurized water jets that effectively remove dirt, blood, fat, and other contaminants. It operates automatically when stepped on, providing hands-free cleaning that is fast, efficient, and ideal for high-traffic entry points.

In many modern processing facilities, passing through a sole cleaning station like this is mandatory. It helps prevent cross-contamination, ensures compliance with hygiene regulations, and supports food safety from the ground up.

Whether installed at the entrance to cutting rooms, packaging zones, or clean areas, the RC Boots Sole Washing Machine contributes to a safer, cleaner, and more professional working environment.
