

RC Air Shower System

Air showers are used in purification equipment in industries such as medicine, hygiene, raw and cooked food processing, precision instruments, instrumentation, and aviation. Their main purpose is to remove dust, hair, and other debris from the surface of operators' clothing using clean air before they enter the workshop. Initial and intermediate efficiency filtration removes these particles, preventing them from entering the workshop and ensuring hygiene standards are met to improve product quality.

Air showers use a PLC intelligent control system with automatic induction and air showering. The air shower time and blowing speed are adjustable within a certain range.
