

RC CLEAN DRAINAGE SYSTEM

- Widely used in the pharmaceutical industry, conditioning workshops, purification workshops, clean workshops, seafood workshops, slaughter and cutting workshops, food processing plants, beverage processing plants, central kitchen factories, and municipal drainage systems. All equipment is made of SUS304 stainless steel, meeting GMP/HACCP certification requirements, and can also be customized with stainless steel 316 according to customer needs.
- The comprehensive industrial drainage solution adopts diversified design concepts, including hidden trenches and open trenches, featuring an attractive appearance, easy cleaning, high load-bearing capacity, high hardness, strong aging resistance, freeze resistance, corrosion resistance, and low permeability. Two types of floor drains, square and round, are available with excellent surface treatment and minimal welding points, effectively preventing odor backflow and the entry of harmful pests such as rodents into the workshop, helping to maintain a clean and hygienic environment.
- The latest floor drain system features a standard modular design with bolt connections, eliminating the need for on-site welding, saving installation time and reducing labor costs. Pre-fabrication in the workshop minimizes on-site errors and improves installation quality. The modular combination can be customized according to different customer spaces and requirements.
