

RC INTELLIGENT HIGH-PRESSURE CLEANING SYSTEM

This device is a widely used cleaning system internationally. Through processes such as water spraying, foam spraying, and disinfectant spraying, it can effectively clean machines, containers, countertops, walls, and floors. The water output pressure ranges from 22–35 kg and is controlled by a programmable logic controller (PLC). The complete human-machine interface is equipped with a touchscreen, making operation intuitive, simple, and efficient. The output system uses variable frequency control to achieve maximum energy savings. It features comprehensive peripheral protection functions. Integrating a booster pump and foam station, it has become a dedicated device for cleaning and disinfecting production equipment, environments, and tools in the meat processing, slaughtering, aquatic products, beer and beverage, and other food processing industries. This system is suitable for large and medium-sized production workshops, ensuring the cleanliness and hygiene standards required in modern large-scale meat processing plants.

This equipment is an independently developed product that meets cleaning requirements while reducing the initial investment cost of cleaning equipment. It is suitable for food processing, animal husbandry, automotive services, industrial cleaning services, and other industries. The equipment provides a water pressure range of 8.0–20.0 MPa, with high-pressure water spraying, foam cleaning agent spraying, and disinfectant spraying functions. It features convenient installation and automatic quantitative liquid dispensing.
