

RC AUTOMATED PRODUCTION LINE FOR FISH PROCESSING

This production line mainly consists of a primary cleaning machine, a fish descaling machine, an auxiliary operating table, a filleting machine, a double-layer belt-type fish processing line, a finished product cleaning machine, a secondary trimming table, and other equipment. It is mainly used for batch processing of fish, meets hygiene requirements, and is easy to clean.

The cleaning machine is very easy to clean, the fish descaling machine can set the speed and processing time, causing minimal damage to the fish, the filleting machine can be equipped with two or three filletters according to customer requirements, the double-layer conveyor belt can separate raw materials and finished products, and it features high automation, high efficiency, and easy cleaning, making it very suitable for mass production in factories.
