

SHEEP PUNCH ARM

Model SPA-1

The Sheep Punch Arm Model SPA-1 is a specialized tool designed for the humane and efficient punching of identification holes in sheep ears. This tool is commonly used in sheep management, breeding, and identification processes.

- Manufactured with a high-density plastic head or a stainless-steel twin-roller head with a belly bar
- Powered by a pneumatic cylinder, hand operated by a trigger valve to actuate the cylinder and water feed to lubricate the head as it punches down the flanks.
- Designed to clear the side flank area of the sheep before the pelt removal. The support frame is fabricated from mild steel box section, with a hot-dip galvanized finish, and the punch arm is supported by an adjustable top section.
- Mounting brackets to suit individual requirements.
